

Introducing the new HDJ-500 headphones for home DJing with
cord and microphone included
The new **HDJ-500T-K** for hands-free phone calls,
even when listening to music

Malaysia, 27th April 2011: Pioneer announces the release of the HDJ-500T-K with included cord and microphone, a new model of the HDJ-500 series of headphones for home DJing.

The HDJ-500 headphones for entry-level DJs are popular thanks to their clear middle and low range, which includes the drum kick and snare sounds that are so important for DJ mixing. Thanks to its included cord and microphone, the HDJ-500T-K can be utilized in even more situations. The headphones can be adapted for various situations. For example, you can use the curly cord when DJing or use the straight cord with the microphone for hands-free talking when listening to music on a mobile phone.

With the HDJ-500T-K, you can enjoy DJ-quality sound anywhere at anytime. Pioneer is working to strengthen its lineup and actively increase its activities in the DJ market.

Main features

1. Hands-free talking, even while listening to music on a mobile phone

In addition to the curly cord, a 1.2-m straight cord with microphone and phone button is also included. Push the phone button to quickly answer the phone and start a hands-free call, even when listening to music on your mobile phone.

(*The straight cord cannot be connected to the ø6.3 mm 3P plug adapter)

2. Clearly Reproduces Low-Mid Range Sound, such as Kick and Snare Drums, that DJs Need

Reproduces a rich low-range and increases the sound pressure by utilizing our newly developed 40 mm diameter driver unit, which uses a rare-earth super magnet and by narrowing the ear pad opening.

Further, by adopting the thickest diaphragm ever at 19 µm (micrometers) and a copper clad aluminum wire (CCAW) voice coil, the headphones reproduce the clear low-mid range sounds necessary for DJ mixing, such as snare and kick drum sounds, which allows even entry level DJs to readily pick out the tempo of the music.

3. Compatible with Various DJ Monitoring Styles

The headphones allow for various DJ monitoring style by employing a rotating arm structure that allows it to slide to about 60 degrees to the right housing and via the flexible headband we created that maintains side pressure, allowing the DJ to listen with just one ear.

4. Uses an Interchangeable Side-Mount Cord that doesn't Hinder DJ Movement

Adopted an interchangeable cord that plugs into one side of the headphones so it doesn't hinder the DJ's movement. The headphones come with a 1.2 m coiled cord (extends to about 3 m) and a 1 m straight cord, which can be used for different purposes and scenes—whether listening to music out on the town or while DJing.

5) Emulates the Design of Professional DJ Headphones

Created a simple and stylish design that emulates the design of Pioneer's own professional DJ headphones, our flagship model HDJ-2000. And the streamlined hanger makes it a snap to distinguish the left and right sides of the headphones.

*1 70% compared to our other DJ headphones

Main Specifications

Type:	Fully enclosed dynamic headphones
Frequency response:	5 Hz–28,000 Hz
Impedance:	45 Ω
Maximum power input:	2000 mW
Sensitivity:	105 dB
